

# JOSSSELIN BOHLER

Lead Reliability Engineer

## CONTACT

josselinbohler@hotmail.com  
France · Internationally mobile  
FIFO experienced  
linkedin.com/in/josselinbohler

## CORE SKILLS

- ▶ Production availability & RAM
- ▶ FMECA / AMDEC
- ▶ RCA (Apollo, 5-Why, Ishikawa)
- ▶ RCM & maintenance strategy
- ▶ RBD / Monte Carlo / Markov
- ▶ Weibull & criticality studies
- ▶ SIL-related reliability studies
- ▶ Reliability data quality
- ▶ Technical leadership & training

## SOFTWARE & DATA

- ▶ AvSim (availability / RBD modelling)
- ▶ OnePM & Cordant™ (Baker Hughes SaaS)
- ▶ Python, SQL & relational databases
- ▶ SAP PM, AWB Workbench, Quickbrain
- ▶ ANSYS (FEA), SolidWorks

## LANGUAGES

English — Bilingual  
French — Bilingual / Native

## EDUCATION

**M.Eng, Mechanical Engineering**  
El.CESI — France · 2007–2010  
Graduated with Honors (2010)

**Engineers Australia**  
Mechanical / Industrial · 2016

## PROFILE

Reliability engineer with 15+ years across international engineering studies and plant operations in oil & gas, LNG, power generation, biomass, new energy, mining and petrochemicals. Leads production-availability and asset-strategy work from data collection and modelling through practical recommendations. Combines probabilistic reliability methods with hands-on knowledge of equipments and industrial operations. Experienced in coordinating engineering teams, facilitating workshops and developing Python tools for analysis and data-quality checks.

## EXPERIENCE

### Lead Reliability Engineer

**Baker Hughes (ARMS Reliability)**

Mar 2023 – Present

France-UK / Remote

Lead reliability engineering, production availability and Asset Strategy Management (ASM) work for international projects.

- **Moeve (formerly CEPSA) – Spain:** Reliability Block Diagram (RBD) and production availability model in AvSim for a petrochemical facility. Applied probabilistic modelling and Monte Carlo simulation. Assessed production capacity. Performed equipment criticality & SIL-related studies.
- **OLT Offshore LNG Toscana – Italy:** Led a team of engineers and facilitated on-site FMECA workshops for an offshore LNG terminal. Analysed site data and optimized maintenance strategies in OnePM. Delivered practical recommendations and updated maintenance plans.
- **ONEOK – Texas, USA:** Improved maintenance strategies for process units, including crackers. Used OnePM and Cordant™ to build and optimize maintenance tasks. Worked on site with engineering, maintenance and operations teams.
- **Airbus – France:** Delivered on-site reliability and maintenance training.
- **Ok Tedi Mining – Papua New Guinea:** Provided FIFO (Fly-In Fly-Out) reliability support for a copper and gold mine. Developed maintenance strategies using OnePM/Cordant™. Addressed site-specific reliability issues.
- **Innovation & AI:** Developed AI tools for reliability. Automated task for quality checks. Contributed to Baker Hughes' internal Data & AI group. Supported & validation of new reliability solutions.

### Performance & Reliability Engineer

**Dalkia**

Dec 2019 – Feb 2023

Biganos, France

- **Availability & Data:** Analysed operational and maintenance data to identify production losses, recurring failures and improvement opportunities. Led reliability reviews and RCA workshops with operations and maintenance teams.
- **Project Leadership:** Led the replacement of three site-wide air compressors with BOGE units without production interruption. Defined recommendations and followed implementation with maintenance and operations teams.
- **Reliability Improvement:** Optimized maintenance for wood-screw feeders and implemented a conveyor-belt magnet to improve process reliability.
- **CMMS & Maintenance:** Implemented the Quickbrain CMMS onsite. Managed equipment and reliability data to improve maintenance planning and performance monitoring.

## INTERESTS & ACTIVITIES

- ▶ Founder of a community on industrial reliability & AI (7000 people)
- ▶ Kitesurfing, surfing, mountain biking and outdoor activities
- ▶ Mechanical, automotive
- ▶ Cooking and intern. cuisine

## Maintenance Reliability Engineer

Nov 2017 – Nov 2019

### ARMS Reliability

*Perth, Australia*

Asset Strategy Management (ASM) and reliability improvement projects for Australian mining operations.

- **Iron Ore Mining – Fortescue, Christmas Creek:** Updated maintenance strategies for critical equipment. Covered crushers, wet screens, HPGRs, conveyors and cyclone feed pumps. Analysed SAP failure history. Applied Weibull analysis and led FMECA workshops. Recommended improvements to maintenance tasks and critical spare parts.
- **On-site Reliability – FIFO:** Conducted Apollo RCA investigations on gearboxes, pumps and hydraulic cylinders. Defined and followed corrective actions. Developed PRT maintenance documents and SAP load sheets for field implementation.
- **Gold Mining – Gold Fields GJV:** Built complete asset and maintenance strategies in OnePM. Covered turbines, boilers, crushers and other critical equipment. Used Reliability Block Diagrams (RBD) to assess production flow and identify bottlenecks. Facilitated workshops on failure modes and shutdown intervals. Integrated the final maintenance plans into the CMMS.

## Power Plant Reliability Engineer

Dec 2015 – Nov 2017

### Koniambo Nickel SAS (Glencore)

*New Caledonia*

Worked full-time on site at the power plant supporting the Koniambo Nickel industrial complex.

Responsible for the reliability and maintenance of two 40 MW gas turbines, four diesel generators and auxiliary systems.

- **Reliability & Technical Support:** Provided mechanical, electrical and instrumentation troubleshooting. Supported gas turbines, diesel generators, pumps, motors, cooling systems and fire-protection systems. Investigated turbine trips using RCA. Defined and followed corrective actions.
- **Maintenance & Outages:** Managed preventive and corrective maintenance. Planned and led major outages. Coordinated execution and return to service. Performed borescope and thermographic inspections.
- **Reliability Strategy:** Applied FMECA and implemented Reliability-Centred Maintenance (RCM). Wrote and improved maintenance instructions. Presented reliability issues and technical recommendations to site management.
- **Asset Management & Contracts:** Optimized critical spare parts. Managed a Long-Term Service Agreement (LTSA) worth over US\$6 million. Represented the site in the Australian Trent Turbine User Group.

## Mechanical Engineer — Gas Turbines

Feb 2011 – Apr 2015

### Capgemini

*Pau, France*

Worked as a consulting engineer for Safran Helicopter Engines, formerly Turbomeca, and other energy and aerospace clients.

- **Mechanical Design & FEA:** Used ANSYS Finite Element Analysis (FEA) to assess mechanical and thermal stresses. Optimized compressor geometry and supported design improvements.
- **Component Reliability:** Studied compressors, blades, casings, cooling systems, fans and valves. Assessed vibration, fatigue, corrosion and mechanical integrity. Contributed to FMEA and root-cause investigations.
- **Project Delivery:** Managed engineering studies from customer requirements to technical analysis and design recommendations. Supported solution implementation.
